1 Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

IOExpander	
 Arduino - IO Expander Driver	2
IOExpanderMCP23X17	2

2 File Index

2.1 File List

Here is a list of all files with brief descriptions:

IOExpander.cpp	8
IOExpander.h	9
IOExpanderMCP23X17.cpp	10
IOExpanderMCP23X17.h	11

3 Class Documentation

3.1 IOExpander Class Reference

```
#include <IOExpander.h>
```

3.1.1 Detailed Description

Arduino - IO Expander Driver.

IoExpander.h

The generic io expander driver functions

Author

Dalmir da Silva dalmirdasilva@gmail.com

Definition at line 14 of file [IOExpander.h](#).

The documentation for this class was generated from the following file:

- [IOExpander.h](#)

3.2 IOExpanderMCP23X17 Class Reference

```
#include <IOExpanderMCP23X17.h>
```

Public Types

3.2.2.4 enum IOExpanderMCP23X17::Port

Enumerator

PORT_A
PORT_B

Definition at line 67 of file [IOExpanderMCP23X17.h](#).

3.2.2.5 enum IOExpanderMCP23X17::Register

Enumerator

IODIRA
IODIRB
IPOLA
IPOLB
GPINTENA
GPINTENB
DEFVALA
DEFVALB
INTCONA
INTCONB
IOCON

GPPUA
GPPUB
INTFA
INTFB
INTCAPA
INTCAPB
GPIOA
GPIOB
OLATA
OLATB

Definition at line 42 of file [IOExpanderMCP23X17.h](#).

3.2.2.6 enum IOExpanderMCP23X17::SequentialOperationMode

Enumerator

SEQUENTIAL_MODE_ENABLE
SEQUENTIAL_MODE_DISABLE

Definition at line 38 of file [IOExpanderMCP23X17.h](#).

3.2.3 Member Function Documentation

3.2.3.1 void IOExpanderMCP23X17::begin (unsigned char *device*)

Begins the IO expander device.

Parameters

<i>device</i>	The device address, or just the last 3 pins combination;
---------------	--

Definition at line 16 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.2 void IOExpanderMCP23X17::configureRegisterBits (Register *reg*, unsigned char *mask*, unsigned char *value*)

Configures a registers.

Parameters

<i>reg</i>	The register number.
<i>mask</i>	The mask to be used.
<i>v</i>	The value to be used.

Definition at line 41 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.3 bool IOExpanderMCP23X17::digitalRead (unsigned char *pin*)

Reads the value from a specified pin, either HIGH or LOW.

Parameters

<i>pin</i>	The pin number.
------------	-----------------

Definition at line 36 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.4 void IOExpanderMCP23X17::digitalWrite (unsigned char *pin*, bool *value*)

Write a HIGH or a LOW value to a pin.

Parameters

<i>pin</i>	The pin number.
<i>value</i>	LOW or WRITE.

Definition at line 31 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.5 void IOExpanderMCP23X17::pinMode (unsigned char *pin*, bool *mode*)

Configures the specified pin to behave either as an input or an output.

Parameters

<i>pin</i>	The pin number.
<i>mode</i>	1 means input, 0 means output.

Definition at line 21 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.6 void IOExpanderMCP23X17::portMode (Port *port*, unsigned char *mode*)

Configures a port to behave either as an input or an output.

Parameters

<i>port</i>	The port.
<i>mode</i>	The mode.

Definition at line 26 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.7 unsigned char IOExpanderMCP23X17::portRead (Port *port*) [inline]

Reads a port.

Parameters

<i>port</i>	The port to write.
-------------	--------------------

Returns

The value associated with the port.

Definition at line 158 of file [IOExpanderMCP23X17.h](#).

3.2.3.8 void IOExpanderMCP23X17::portWrite (Port *port*, unsigned char *value*) [inline]

Writes value to a port.

Parameters

<i>port</i>	The port to write.
<i>value</i>	The value to write to the port.

Definition at line 148 of file [IOExpanderMCP23X17.h](#).

3.2.3.9 int IOExpanderMCP23X17::readRegister (Register *reg*)

Reads a value from a register.

Parameters

<i>reg</i>	The register number.
------------	----------------------

Returns

The register value.

Definition at line 56 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.10 void IOExpanderMCP23X17::setPinInterrupt (unsigned char *pin*, bool *interrupt*)

Configures a pin to clear or set the interrupt.

Parameters

<i>pin</i>	The pin number.
<i>pullUp</i>	0 means interrupt disable, 1 means interrupt enable.

Definition at line 84 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.11 void IOExpanderMCP23X17::setPinPolarity (unsigned char *pin*, bool *polarity*)

Configures the polarity for a given pin.

Parameters

<i>pin</i>	The pin number.
<i>pullUp</i>	0 means normal, 1 means inverted polarity.

Definition at line 79 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.12 void IOExpanderMCP23X17::setPinPullUp (unsigned char *pin*, bool *pullUp*)

Configures the pullup resistor for a given pin.

Parameters

<i>pin</i>	The pin number.
<i>pullUp</i>	0 means with, 1 means without pullup.

Definition at line 74 of file [IOExpanderMCP23X17.cpp](#).

3.2.3.13 void IOExpanderMCP23X17::setSequentialOperationMode (SequentialOperationMode *mode*)

Configures the sequential/continuous operation mode.

Parameters

<i>mode</i>	The operation mode.
-------------	---------------------

3.2.3.14 int IOExpanderMCP23X17::writeRegister (Register *reg*, unsigned char *value*)

Writes a value to a register.

Parameters

<i>reg</i>	The register number.
<i>v</i>	The value to be used.

Definition at line 49 of file [IOExpanderMCP23X17.cpp](#).

3.2.4 Member Data Documentation

3.2.4.1 unsigned char IOExpanderMCP23X17::device [private]

I2C device address.

Definition at line 34 of file [IOExpanderMCP23X17.h](#).
